

Pressure Right SmartCare™ Acupressure Intervention For Nausea Control & More

Pressure Right acupressure strips are USFDA 510(k) cleared to help surgery patients effectively deal with both early and delayed postoperative nausea and vomiting (PONV) symptoms. Its consistent anti-nausea effectiveness is continuous for up to 3 days. As a result, patients can have a hassle-free experience leading to a better quality of life recovery from PONV issues associated with surgery.

Pressure Right's nausea resistant mechanism taps into the body's energy system, which is responsible to keep organs healthy. In the case of the P6 acupoint, the latter becomes the trigger point when stimulated by acupressure to transfer a sufficient amount of energy to override the effects of nausea and vomiting. The transference of this energy is directed to the heart, mind and stomach to repel the upsetting and prolonged impact of PONV nausea and vomiting issues.

providing continuous prolonged nausea and vomiting relief. There are no adverse effects associated with the use of Pressure Right.

Pressure Right compliments PONV antiemetic drug programs

Relief from PONV is one of the main concerns of surgery patients, especially in women who have a predisposition to PONV issues.

Pressure Right's acupressure therapy used either as a preventive and/or treatment measure in conjunction with initial antiemetic drug therapy, helps calm the heart and mind as well as shields the stomach from nausea and vomiting disturbances associated with PONV. Pressure Right is a suitable adjunct for surgery patients, either as a preventative or as a rescue treatment.
